Aqueos Corporation Adds Saturation Diving To Service Line

Broussard, La. – July 1, 2010 – Aqueos Corporation, a leading Subsea Services provider for the offshore oil and gas sector, announces that it has signed a purchase agreement with Unique Systems, LLC for a new build, 12-Man, 1000' rated Saturation Diving System. The System will be DNV Classed, IMCA compliant, modular in design for 6 man or 12 man configurations, and will include a Hyperbaric Rescue Chamber (HRC), HRC Launching system, and a “fly-away” HRC Control Van. The construction of the state-of-the-art system is taking place in New Iberia, LA and has a scheduled delivery in March, 2011.

“The purchase of this system as well as the employment of highly qualified, experienced saturation diving personnel solidifies our commitment to provide safe and first-class solutions to the market,” says President/CEO, Ted Roche. “Our proven performance in safety and operational excellence is complemented by this addition to our service line.”

Some of the technical highlights of Aqueos' Saturation System include a 3 Man Diving Bell, the ability to utilize the HRC for additional decompression, two twin lock 6-man living habitats, gas reclaim, and advanced mechanized designs for bell and umbilical handling. Roche comments, “a state-of-the-art, fully classed designed system reinforces our objective and byline: *Excellence in Subsea Solutions* and further positions the company as a full service subsea service provider.”

Aqueos Corporation, with offices in Broussard, LA and Carpinteria, CA provides marine construction and specialty subsea services including a complete range of commercial diving, remotely operated vehicles (ROV) and vessel-related services primarily to the offshore oil and gas markets.
